How to login optus modem

Your Optus WiFi router is more than just a plastic box that gets you connected to the Internet. It's also a favorite for hackers who want to use your broadband plan and connection to gain access to your data, as well as commit crimes against others. Optus does a lot to keep your connection safe and secure. For instance, the telco introduced WiFi Secure in partnership with McAfee, which is a WiFi security software that's installed on the router/modem itself, rather than your device. That way, any device that connects to the Internet via your modem is already secure. But despite such measures, WiFi modems/routers are vulnerable by nature. That's because they aid wireless connections rather than wired connections, which means there's always the possibility of a breach. To avoid such security breaches, there's a lot more you need to know about your router's WiFi security methods, beyond just setting up a strong WiFi password. Your WiFi Protected Setup (WPS) is either WEP, WPA, or WPA2. Here's a look at each security method, ranked from the most secure to the least secure: 1. WPA2 + AES2. WPA + AES3. WPA + TKIP/AES4. WPA + TKIP5. WEP6. Open NetworkTo change your security method, disable your WPS and choose one of the above methods. Remember, they are ranked from best to worse, so be sure to choose WPA2 + AES3 if it's available. If your router is running a WEP security method, be sure to change this as it is the weakest amongst methods. The only worse option is having an open network with no security at all. WiFi passwordNow that you've chosen the best available security method for your Optus WiFi router, your next step at a secure network is to change your password to something much stronger. It's important to create a password with as many characters as possible - a mix of alphabets, symbols, and numbers - because hackers look for the easiest passwords to crack. Part of what makes WPA2 and WPA security methods your best options is the fact that they allow you to create a password with up to 63 characters. That's more than enough to get as creative, complicated, and confusing as possible to deter any WiFi hackers and squatters from trying to use your network. How to change your Optus NBN and Home Broadband modem username and passwordYour Optus modem likely already has a default username and password. In most cases, you'll find this information at the bottom of your modem. If you can't find it there, you can also log into your modem's WiFi settings to find your factory-set username and password. Remember, you need a strong password to keep your WiFi secure. This means that you should change your password to something customized, instead of the default password that comes with the router. Here's how to change your Optus WiFi password, depending on your modem's make and model: Netgear DGN220 and SAGEM 1201Switch on your modem and connect your device to it > Open your browser and enter > Go to your WiFi setup menu and change your username (usually referred to as SSID) and password. NETGEAR DG834Switch on your modem and connect your device to it > Open your browser and enter > Enter your default username - admin - and your default password - password > Click on the WiFi or Wireless setup menu to change your username and password. SAGEM 3864 and SAGEMCOM 3864V30P/3864V3AC - Switch on your modem and connect your device to it > Open your browser and enter > Go to your WiFi setup menu and change your username and password. Other Optus DSL Modems Switch on your modem and connect your device to it > Open your browser and enter > Enter your default username - admin - and your default password - password > Click on the WiFi or Wireless setup menu to change your username and password. What to do if you forget your SSID and/or password for your Optus modem/WiFiIf you forget your customized username and password, then you'll have to perform a factory reset on your Optus modem in order to log back in. To do so, you'll have to hold down the reset button for a few seconds, usually located underneath or at the back of your modem. After that, log into your WiFi using the default username and password and change your details to something more secure. Final wordsHow sick are you of trying to remember the different passwords you have? It is common for people to have up to 20 passwords they need to keep track of - either remembering a lot of hard to recall sequences of alphanumeric characters or, even worse, writing them down somewhere. The problem with that is that it can cause people to standardise their passwords out of frustration because of how difficult it is to keep track of so many different passwords. That's really dangerous. From time to time, you'll notice in the news that famous websites get hacked. Facebook and Linked In have both been hacked in recent past. Once hacked, names and passwords are downloaded and sold online using the 'dark web'. This is a huge problem because, if you've standardised your passwords and it has been made available for purchase, people can log in using your password on other sites - for example, your bank. Luckily, WiFi passwords are much easier to manage. The best advice is that, once you've set up your Optus WiFi password, you should make a note of it on a sticky and attach it to your router. When you have visitors that you trust, you can share the code; and if you need it yourself, you know where it is. You can be less stringent in your security precautions for WiFi because, to use your code, hackers will need to be in the same physical location as the WiFi signal - something they will find hard to establish unless you have released a lot of your personal information online. The perfect spot does it all; be it romance or your router! To avail the best signal and network connectivity, make sure you keep your Sagemcom Fast 3864V2 Optus router visible and not facing the wall or behind the curtains. Auto-channels might fail you once in a while; believe that you're smarter than the Sagemcom router! Find a seamless wireless channel instead of what the router finds automatically. This would ensure that your signal doesn't interfere with that of your neighbors. If you're running a Windows-based PC, you can see what channels neighboring Wi-Fi networks are using. Press Start > type 'cmd'. Open Command prompt. In command prompt type netsh wlan show all you will see a list of all wireless networks and the channels being used in your vicinity. Instead of using "Auto" for the control channel, pick the channel that has the lowest interference. Check if Sagemcom Fast 3864V2 Optus has dual-band, the most commonly used band would be 2.4GHz; however, switching to 5GHz would bring out better results! It depends on your device though; if you're running an old lad, you might have to switch back to the conventional Gaming consoles/media streamers work better when connected through Ethernet cable of Sagemcom Fast 3864V2 Optus; in fact, as you might not be moving your TV all over the house, why connect it to the Wi-Fi at all? The Gaming consoles / video streaming devices flood the network with data. This means that if possible, you should consider hardwire (using Ethernet cable) the devices that tend to consume a lot of bandwidth. Although this can sort of defeat the purpose of having wireless networks, it can actually help your overall network speed of Sagemcom Fast 3864V2 Optus if you can hardwire the bandwidth hogs. Here's something important to note! On schedule, folks, reboot your Sagemcom Fast 3864V2 Optus router! Though routers are built to constantly be running at all times, simple tweaks like regular power cycling (a fancy way of saying, unplugging the power cord and shoving it back up) helps with most issues. Rebooting your Sagemcom Fast 3864V2 Optus can fix Internet connection problems, improve slow moving connections, and resolve wireless issues altogether. Try unplugging your Sagemcom modem on a quarterly basis to stay proactive (Never reset; always reboot router) We're still working on technology to support buying Mobile and Home Internet products together, so for now, you have 2 shopping carts. That's Ok, just choose the cart you'd like to push first. We're still working on technology to support buying Mobile and Home Internet products together, so for now, you have 2 shopping carts. That's Ok, just choose the cart you'd like to push first. 7/29/2009 - And of course this WPA passphrase is printed on the sticker underneath the modem, and a reference card (business card sized) in case you can't, for whatever reason, see the bottom of the modem. W... To access a Optus router (for example: Counter-Strike 1.3) you need the corresponding login data and IP address. If you do not know the IP and login information of your router, you will find them in the Optus Router Manual. In case you don't have a manual or don't feel like searching for the data, you can easily use the following login guide. Select your Optus router echo 'Model name...'; Counter-Strike 1.3 Login Guide for Optus Click HERE to automatically detect the IP of your router. The IP detection tool will try to find your router IP and after some seconds you will see a link. Click on this link and you will be forwarded to your router login page Now you see 2 fields where you can enter the router username and router password. The most common default username/password combination for Optus routers is Administrator and admin. Enter the username and password, click on the login button and now you should have access to the user interface of the router. The username/password combination doesn't work ? Then try the following method... If you know the model name/ID of your Optus router then select your device from the dropdown list below. You will be forwarded to our login guide for your device (including user manuals etc.). Select your device echo 'Model name...'; Counter-Strike 1.3 Common username/password combinations for Optus routers We have compiled a list of the most common username/password combinations for Optus routers. Try the different combinations to log in. Often one of the listed combinations works. Username Password Administratoradmin These methods don't work for me and I still not get access to my Optus router! Nothing helped and you don't have access to your router? Then you can do a factory reset. In most cases you can perform a factory reset by pressing a small button on the back of your Optus router for about 10-20 seconds. Afterwards your Optus router lights up and needs several minutes to reset the settings. Because of the factory reset your Optus router loses the connection to all other connected devices and some devices have to be reconnected to the router after such a reset. If you are unsure, you should consult an expert to help you set up the router again.
